MISSISSIPPI STATE DEPARTMENT OF HEALTH 2016 MAY 19 AM 9: 11 BUREAU OF PUBLIC WATER SUPPLY CCR CERTIFICATION CALENDAR YEAR 2015

CITY OF B Public W	SATESVILLE Vater Supply Name
0540002	nity Water Systems included in this CCR
The Federal Safe Drinking Water Act (SDWA) requires Consumer Confidence Report (CCR) to its customers each system, this CCR must be mailed or delivered to the customers upon request. Make sure you follow the propermail a copy of the CCR and Certification to MSDH.	each Community public water system to develop and distribute a ch year. Depending on the population served by the public water ners, published in a newspaper of local circulation, or provided to the er procedures when distributing the CCR. You must mail, fax or lease check all boxes that apply.
Customers were informed of availability of CCR	By: (Attach copy of publication, water bill or other)
X Advertisement in local paper□ On water bills (attach copy o□ Email message (MUST Email□ Other	(attach copy of advertisement) f bill) il the message to the address below)
CCR was distributed by U.S. Postal Service methods used	or other direct delivery. Must specify other direct delivery
Date Mailed/Distributed:/_/	
CCR was distributed by Email (MUST Email M As a URL (Provide URL As an attachment As text within the body of the	SDH a copy) Date Emailed: / / e email message
CCR was published in local newspaper. (Attach	copy of published CCR or proof of publication)
Name of Newspaper: THE PANOLIAN	
Date Published: <u>05 / 13 / 2016</u>	
CCR was posted in public places. (Attach list of	<i>locations)</i> Date Posted:/
CCR was posted on a publicly accessible interne	et site at the following address (<u>DIRECT URL REQUIRED</u>):
public water system in the form and manner identithe SDWA. I further certify that the information in the water quality monitoring data provided to the Department of Health, Bureau of Public Water Suppose Name/Title (Prestilent, Mayor, Owner, etc.) Deliver or send via U.S. Postal Service: Bureau of Public Water Supply P.O. Box 1700	
Jackson, MS 39215	May be emailed to:

CCR Due to MSDH & Customers by July 1, 2016!

2015 Annual Drinking Water Quality Report City of Batesville PWS#: 0540002 May 2016

2016 MAY 19 AM 9: 11

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Lower Wilcox Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been identify potential sources of contamination.

If you have any questions about this report or concerning your water utility, please contact Michael G. Ross at 662-934-9345. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first and third Tuesdays at 2:00 PM at the Batesville City Hall.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2018 I fire asset where monitoring wasn't required in 2015, the table contaminants that were detected during the period of January 1st to December 31st, 2018 I fire asset where monitoring wasn't required in 2015, the table contaminants from the presence of drinkals of from the presence of the presence of the drinking water of the presence of these constituents and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that the presence of these constituents does not necessarily indicate that the water poses a health risk.

in this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure- ment	MCLG	MCL	Likely Source of Contamination	
Microbiolo	gical Co	ontamin	ants						
Total Coliform Bacteria	N	December	Positive	1	NA .	0	bi	ince of coliform acteria in 5% of onthly samples	Naturally present in the environmen

10. Barium	N	2013*	.008	.005 – .008	ppm		2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits	
14. Copper	N	2011/13*	.5	0	ppm		1.3 AL=1.	3 Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives	
16. Fluoride**	N	2013*	.34	.3234	ppm		4	4 Erosion of natural deposits; wate additive which promotes strong teeth; discharge from fertilizer and aluminum factories	
17 Lead	N	2011/13	1	0	ppb		0 AL=1	5 Corrosion of household plumbing systems, erosion of natural deposits	
Disinfectio	,) 	No Range	opb		60	deposits By-Product of drinking water	
81. HAA5	N	2014*	11/	No Range	ppo			disinfection.	
82 TTHM [Total trihalomethanes]	N	2014*	28	No Range	ррь	0	80	By-product of drinking water chlorination.	
Chlorine	N	2015	11117 115	.7 ~ 1.6	mg/l	0 1	MRDL = 4	Water additive used to control	

^{*} Most recent sample. No sample required for 2015.

Microbiological Contaminants:

(1) Total Coliform: Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially-harmful, bacteria may be

(1) folal Coliform. Coliforms are bacteria that are fluctually present in an extension of potential problems, present. Coliforms were found in more samples than allowed and this was a warning of potential problems. We routinely monitor for the presence of drinking water contaminants. We took three samples for coliform bacteria during December 2015. One of the routinely monitor for the presence of drinking water contaminants. We did not find any bacteria in our subsequent testing which shows that this problem has routine samples showed the presence of coliform bacteria. We did not find any bacteria in our subsequent testing which shows that this problem has

We have learned through our monitoring and testing that some constituents have been detected, however, the EPA has determined that your water IS SAFE at these levels.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

To comply with the "Regulation Governing Fluoridation of Community Water Supplies", our system is required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendar year in which average fluoride sample results were within the optimal range of 0.7-1.3 ppm was 0. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.7-1.3

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water to the protection agency Hotline at 1-800-426-4791.

some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hottlne 1-800-426-4791. Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons

The City of Batasville Water works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

^{**} Fluoride level is routinely adjusted to the MS State Dept of Health's recommended level of 0.7 - 1.7 mg/l.
